

*They met again at dinner.*

*The second part did not necessarily lead to a "great enlightenment" for the monk either, but was torn to pieces.*

*He said: "Dear hiker. The second part does not hold any great secrets either. Here an application case for the SMUOS / C3P idea is simply designed. Brother Franziskus has meanwhile explained the technical ideas of that person to me a little."*

*And after a pause he continued: "When you consider that these ideas were probably first found in connection with the F-117A, then you shouldn't be surprised that the robot C-3PO from "Star Wars" plays an important role in this narrative. "*

*Chris refused: "I don't understand"*

*The second monk explained: "The F-117A was sometimes compared to the mask of Darth Vader because of its ugly appearance, and in Star Wars it was the young Anakin Skywalker who had built the C-3PO. Furthermore, it was the C-3PO a protocol droid whose main use was the mediation between man and machine "*

*Slowly Chris saw the light: "I think now I see the chain of associations".*

*The second monk was lenient with Chris, and everyone felt the story shouldn't be checked off yet, so he said, "Then give me a copy of the third book. I want to read it overnight. I'm missing it nor the idea of DIGITS, which also has to do with this complex of ideas "*

*They broke up again after Chris had pulled out a copy and handed it over.*
